The Technology of our Water Structuring Unit

We have developed an unique technology solution for hard water problems, our water structuring unit is based on the principle of turbulence vertex structuring technology (TVST) this will effectively reduce the surface tension and size of the water molecules cluster, water becomes more lighter, and softer, thinner which leads to prevent the scale formation and protect all your appliances.

- ✓ The Ability to Scaling Minerals to Stick Anywhere is Reduced
- ✓ Lower the Water Surface Tension due to Micro Clustering of the Water
- ✓ No More White Flaky Buildup, It can be Easily Wiped Out
- ✓ The Silky, Smooth Texture of Water, Works on Inlet Water Pressure
- ✓ Low Maintenance, Fit and Forget, Easy Installation
- ✓ Water gives Better Lather with Soap and Shampoo

Product Dimension

Product	A	B	Weight
100 LPH	150mm	60mm	430grms
200 LPH	410mm	60mm	425grms
2000 LPH	450mm	70mm	940grms
4000 LPH	660mm	80mm	2250grms

Water can easily be tested for its softness just by boiling before and after the use of Reverent Water Structuring Unit. we can see that there is no scaling formed in the utensil with soft water i.e the water which has come out from Reverent Water Structuring Unit hasn't formed any scaling, it is a fit and forget product.

Note:

The Product performance is based on Motor Capacity and Water Flow rate, kindly contact us for selecting the right size and flow rate capacity of the Reverent Water Structuring Unit.

This is not a water filter, it will not remove or add anything to the water TDS and hardness remain same as inlet water.
